Fall 2018

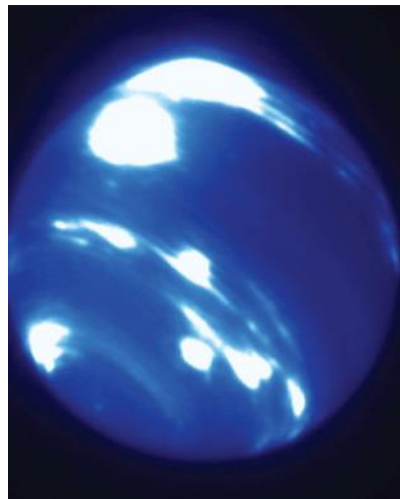

Harcourt “Ace” Vernon Memorial Lecture

**September 26, 2018
7:30 pm Clayton Hall**

Featuring Guest Speaker

Hilton Lewis, Keck Observatory Director
***W.M Keck Observatory: A Portal to
the Universe***

Modern astronomy has undergone explosive growth in its understanding of the universe over the past two decades, fueled by advanced new capabilities on the ground and in space. Join Director Lewis as he demonstrates how our understanding of some of the most fundamental and mysterious aspects of the cosmos is linked to the application of ideas, technology and people at the Keck Observatory – the largest optical/infrared telescopes on the planet.

A storm system the size of Earth on the planet Neptune (left) is only one of many discoveries from Keck Observatory (left).
