May 9, 2005

Here’s how to calculate your current grade based on performance to date.

Calculate your percentage score for each of the assessment items.

Quiz% for 9 out of 10 quizzes. The 9 quizzes count for 25.20 pts.
Lab% for all 10 labs which count for 20 pts.
Exam% which count for 13 pts each.
Homework% which counts for up to 5 extra pts. Compute your Hwk% by adding up all the points you earned and dividing by the total possible points multiplied by 7/8. The total possible points to date are 81 so 7/8 of 81 is approximately 70.

\[
\text{Hwk\%} = \frac{\text{total pts earned}}{70}
\]

If your Hwk\% is >1.0 then write in 1.0 below.

Total percentage score =
\[
\frac{20 \times \text{Lab\%} + 25.20 \times \text{Quiz\%} + 13 \times \text{Exam1\%} + 13 \times \text{Exam2\%} + 13 \times \text{Exam3\%} + 5 \times \text{Hwk\%}}{20 + 25.20 + 13 + 13 + 13} = 84.2 \text{ pts}
\]

Compare your total percentage score to the grading scale on the syllabus.
The Engineering program requires a C- or better which corresponds to > 67 points. There remains only one quiz and one exam for a total of 15.8 pts.
